BAROQUE ART

Illustrated Books of the 17th Century

AN EXHIBITION

IN THE PRINCETON UNIVERSITY LIBRARY

OCTOBER 5, 1963. JANUARY 15, 1964
HE mention of the word “Baroque” no longer causes a frown of disapproval. The old notion of 17th century art—that it tended to be either wildly extravagant and lacking in restraint, or coldly academic and uninspired—has been generally discarded, with the result that we are now better able to appreciate both its intellectual discipline and its emotional power. In contrast to the sophisticated stylizations and elegant artificialities which had been cultivated by the Mannerist style of the 16th century, the Baroque placed renewed emphasis on the sensuous. The art of this period is informed by a fundamental naturalism, a naturalism that is quite as evident in the exuberant mythologies of Rubens as in the deeply compassionate portraiture of Rembrandt. It is true that the taste for allegory continues undiminished; but the Baroque allegory is more often than not conveyed in provocatively realistic terms, in order that its meaning may be more directly apprehended.

Book illustration of the 17th century offers a remarkably faithful reflection of the principal developments in the “major” arts of painting, sculpture and architecture. One reason for this is that the greatest masters of the Baroque did not think it beneath their dignity to prepare designs for books: it is not uncommon, as the present exhibition shows, to find title pages bearing such illustrious names as Bernini, Rubens and Poussin.

Baroque taste, moreover, was essentially pictorial, which meant that book illustrators were encouraged to emulate the effects achieved in more monumental media. It is impossible to look at some of the imaginative frontispieces exhibited here without being reminded of the great illusionistic ceiling paintings of the period. Similarly, the engraved portraits which adorn so many books often retain to a surprising degree the chiaroscuro effects which the painter was so fond of. This book, it seems, was to many a portal to the magical and the phantasmagoric world of Baroque art.
degree the vivid characterization and psychic energy which are the chief qualities of 17th century portrait-painting. The illustrators of books of travel and history were clearly influenced by the Dutch masters of landscape and sea-pieces; and the engravers of homely scenes in emblem books and other literature of this sort took as their models the works of the genre-painters. The bold conceptions of Baroque architects have unmistakably left their mark on the design of those imposing frontispieces which take the form of a building façade.

The Baroque age loved pageantry. Huge sums were spent in constructing elaborate decorations—obelisks, triumphal arches and the like—for princely processions. The handsomely illustrated volumes which were produced to commemorate such events provide what is in many instances the only surviving record of these splendid but temporary monuments, which were usually designed by the leading painters and architects of the day.

The works displayed here have been grouped, for the most part, according to country of origin, in order to illustrate something of the regional diversity as well as the underlying unity of the period. Beyond doubt the finest examples of Baroque book illustration were produced in Italy, France and the Netherlands, a circumstance that may be explained by the existence of flourishing schools of painting in those countries. The evolution of French graphic design is particularly interesting, passing as it does from the quaintly anecdotal, semi-Mannerist illustrations for Philostratus and Ovid in the early part of the century, through the serene classicism of Poussin in the 1640’s, to the pomp and magnificence of the Louis XIV style. In England, where the native tradition of painting rarely rose above a mediocre level, book illustration wore a somewhat provincial appearance, except when, as frequently occurred, Continental artists were employed to draw and
engrave the plates. Throughout much of the century German illustration, like German art as a whole, suffered from the devastation of war. There was notwithstanding some graphic design of high quality, the illustrated astronomical treatises being especially worthy of note. Spain alone presents an exception to the rule that book illustration accurately reflects the standard of achievement in painting. One would hardly guess from the pedestrian designs in Spanish books of the 17th century that they were products of the same age as the canvases of Velázquez, Zurbarán and Murillo.

Scientific books were not regarded in the 17th century as belonging to a realm remote from art and humanistic culture. The engraved frontispieces that grace the works of Galileo and Kepler in this exhibition serve as a reminder that modern specialization had not yet intervened to erect barriers between the various intellectual disciplines. A word might be said, finally, about map-making. The 17th century was not only an age of exploration, it was also an age of cartography. The beautiful atlases produced by the Blaeu press in Holland convey no less clearly than the landscapes of Ruysdael a sense of the expanding horizons of the Baroque.

The vignette on the cover is the work of the French engraver Claude Mellan. It was designed as an ornament for the edition of Virgil published by the Imprimerie Royale at Paris in 1641.

This engraving, by Alessandro Specchi after Carlo Fontana, shows the preparations for the enterprise, which took four months to complete and required some nine hundred workmen and seventy-five horses.

Folding plate, 169: "Dispositione e Veduta generale delle Machine che servviono per alzare l'Obelisco Vaticano."

7. Franciscus Junius. DE PICTURA VETERUM. Rotterdam, 1694. [ND 60.J96q (Ex)]

Junius's book "On the Painting of the Ancients" was first published in 1637. The title page of this edition, by Jan Mulder after Adriaen van der Werff, is an example of the classicizing manner that became fashionable in Holland toward the end of the seventeenth century.

Title-page.
8. Jacob Cats. SILENUS ALCIBIADIS. Amsterdam, 1618. [N7710.C31 (Ex)]

The Dutch poet Cats, who was the author of a number of emblem books, took his inspiration from popular proverbs and everyday life. His realistic emblems thus form a counterpart to Dutch genre painting. The illustration of "Children's Games" may appear to be nothing more than a picture of youngsters at play, but (as the accompanying poem explains) it is also to be interpreted as an image of adult folly. The boy blowing bubbles alludes to the vanity and transience of life; the boys on stilts signify those who are prone to the sin of pride; the child rolling a hoop is reminiscent of Time and the seasons as it moves along over dry ground and through puddles, etc.

Double-page plate, between pp. 106-107:
"Kinder spel ghedundet tot sinnebeelden ende leere der seden. Ex nugis Seria."

Folding plate following Part 2, p. 166.
10. Adriaen van der Donck. BESCHRIVINGE VAN NIEUW-NEDERLAND. Amsterdam, 1655. [Kane].

One of the earliest descriptions of New Netherlands, written by a Dutchman who settled there in 1642. Opened to the view of Manhattan - second impression of the first view of the future city of New York. The view is here reversed.

Page 9: "t' Fort nieuw Amsterdam op de Manhatans."

11. A.O. Exquemelin. DE AMERICAENSCH ZEE-ROOVERS. Amsterdam, 1678. [Kane].

An account of the exploits of French and English buccaneers in their attacks against the Spaniards in the West Indies. This immensely popular book, translated into English as the "Bucaniers of America," is the prototype of many later pirate stories. The engraved portrait shown here is that of the famous Welsh buccaner, Sir Henry Morgan (erroneously called John).

Facing p. 74: "Johan Morgan, Gebooren in de Provincie van Walles, in Engelandt Generaal van de Roovers op Jamaica."

constructed by the Duke of Parma, captain of the Spanish
forces, was attacked by a fleet of fire-ships.

The fore-title of Galileo's "Dialogue concerning the Two Chief World Systems" was engraved by the Florentine artist Stefano della Bella. It represents Aristotle, Ptolemy and Copernicus (the last-named with the features of Galileo himself).

Engraved fore-title, preceding printed title-page.
16. GALLERIA NEL PALAZZO FARNESE IN ROMA...DIPINTA DA ANNIBALE CARRACCI INTAGLIATA DA CARLO CESIO.

It is described in the book as follows: "And in the midst of all...stood a Machine of six feet and two inches high, representing on the one hand the Figure of the Church, on the other Time drawing Truth out of a Cloud, through which, the Sun breaking forth, A Winged Heroe, with a spear in his hand, chas'd Fraud and Discord: And on the Base lay a dismember'd Hydra; thereby denoting Rebellion supprest and vanquish't: And over all stood his [Britannic] Majesties Arms."

Plate 10, between pp. 66-67.

A famous treatise on music by the German Jesuit scholar Athanasius Kircher. The fore-title was designed by Johann Paul Schor, a German artist resident in Rome, who has endeavored to convey in allegorical terms the wide range of subjects treated in this formidable tome.

Engraved fore-title, preceding printed title-page.

**THE ARTISTS**

The book is particularly important for Flemish artists of the seventeenth century. Opened to the portrait of Van Dyck, engraved by Paul Pontius after the painter's self portrait.

Engraving at p. 75.

The German painter Sandrart lived in Italy 1628-35, and there met many of the famous artists of the day. His book is thus a useful source of information for the art of the seventeenth century. This illustration, by Philipp Kilian after Sandrart himself, contains portraits of Bernini, Guercino, Pietro da Cortona and others.

Plate "T," following p. 200.

Bellori's "Lives of the Modern Painters, Sculptors and Architects" contains the biographies of twelve artists of the late sixteenth and early seventeenth century, including such notable figures as Caravaggio, Annibale Carracci, Rubens and Nicolas Poussin (with whom he was personally acquainted). The portrait of Poussin shown here was engraved by Albertus Clouwet after the artist's self portrait of 1650.

26. Blaise de Vigenère. LES IMAGENS OU TABLEAUX DE
   PLATTE PEINTURE DES DEUX PHILOSTRATES. 2nd

   Vigenère's French translation of the "Imagines"
   of Philostratus first appeared in 1614. The numerous
   engravings, though somewhat old-fashioned and certainly
   non-classical in style, offered a rich store of
   mythological imagery to French artists of the seven-
   teenth century. The volume is opened at the picture
   of Narcissus.

   one of the ablest French engravers of the seventeenth
   century. The plate shown here illustrates the method
   of transferring a design to the curved surface of a
   vault.

Vol. 1

The frontispiece depicts a synod of the Reformed Church in France, such as had been authorized by Henri IV in his Edict of Nantes (1598), but which had been outlawed in 1685 by Louis XIV's Revocation of the Edict. This documentary history of the Reformed Church in France, compiled by an English Minister of the Gospel, John Quick, was thus published seven years after the "fatal Catastrophe."
